

Comparing celestial bodies

Comparing celestial bodies

Adjectives describe nouns.

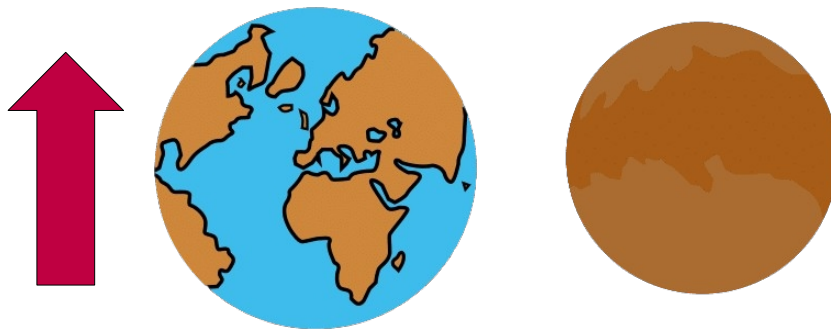

Some examples are: large, big, small, cold, hot, bright, slow or fast.

For example: Jupiter is large.

Comparative adjectives compare two nouns.

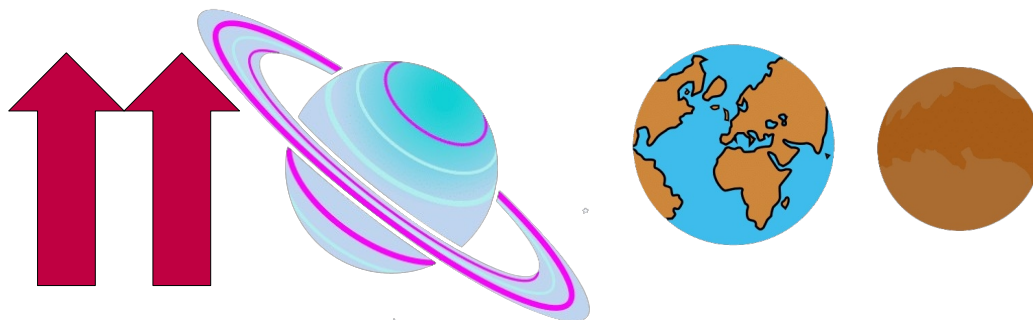

They are formed with the "**adjective + -er + than**".

*For example: Earth is **larger than** Mars.*

Superlative adjectives compare three or more nouns.

They are formed with "**The adjective + est**".

*For example: Saturn is **the largest** planet.*
